

**AMENDMENTS TO THE CLAIMS**

1. (Currently amended) A delivery-medium producing apparatus comprising:

a receiving unit operable to receive a plurality of images from a plurality of users,  
wherein said receiving unit receives each of said plurality of images from a corresponding user  
automatically in accordance with an instruction which is determined by each user in advance;

an image keeping apparatus operable to keep said plurality of images received and  
recorded therein by said receiving unit; and

a delivery-medium recording unit operable to record said plurality of images onto  
recording media in such a manner that each of said recording media stores one or more images of  
said plurality of images that were received from one of said users only.

2. (Original) A delivery-medium producing apparatus as claimed in claim 1, further comprising:

another receiving unit operable to receive a negative film; and

an image converting unit operable to read an image recorded onto said negative film and  
to convert said read image into a digital image,

wherein said digital image is kept by said image keeping apparatus and is recorded onto  
one of said recording media for a corresponding user.

3. (Original) A delivery-medium producing apparatus as claimed in claim 1, wherein said  
delivery-medium recording unit records said one or more images onto one of said recording  
media for said one of said users at predetermined intervals.

4. (Original) A delivery-medium producing apparatus as claimed in claim 1, wherein said  
delivery-medium recording unit records said one or more of said plurality of images when a  
recording instruction from said one of said users is received.

5. (Original) A delivery-medium producing apparatus as claimed in claim 1, further comprising a  
database operable to store information related to each of said plurality of images in such a

manner that said information corresponds to said each of said plurality of images, wherein  
said delivery-medium recording unit records said plurality of images onto said recording  
media based on said information in said database.

6. (Original) A delivery-medium producing apparatus as claimed in claim 5, wherein said  
information includes at least a user ID of said each of said plurality of images that specifies a  
corresponding user.

7. (Original) A delivery-medium producing apparatus as claimed in claim 6, wherein said  
information further includes at least one of a date and a place said each of said plurality of  
images was captured, and  
said delivery-medium recording unit records said plurality of images after classification  
of said images based on said at least one of said data and said place.

8. (Original) A delivery-medium producing apparatus as claimed in claim 1, further comprising:  
an extra-printing-request receiving unit operable to receive an extra-printing request for  
an image of said plurality of images kept by said image keeping apparatus from a corresponding  
user; and  
an extra-printing processing unit operable to print said image to be extra-printed onto  
paper in accordance with said extra-printing request.

9. (Currently Amended) A delivery-medium producing apparatus as claimed in claim 8, wherein  
said extra-printing request specifies said image to be extra-printed, and the number-quantity and  
~~the size of the~~ extra print.

10. (Original) A delivery-medium producing apparatus as claimed in claim 8, further comprising  
a database operable to store image IDs respectively assigned to said plurality of images, wherein  
said extra-printing request specifies said image to be extra-printed by specifying one of  
said image IDs that is assigned to said image to be extra-printed, and

said extra-printing processing unit specifies said image to be extra-printed by referring to said database.

11. (Original) A delivery-medium producing apparatus as claimed in claim 10, wherein said recording media stores said image IDs respectively assigned to said images together with said images, to help each of said users to select said image to be extra-printed.

12. (Original) A delivery-medium producing apparatus as claimed in claim 1, further comprising an extra-printing-request receiving unit operable to receive an extra-printing request for an image of said plurality of images kept by said image keeping apparatus from a corresponding user, wherein

said delivery-medium recording unit records said image to be extra-printed onto a new recording medium.

13. (Original) A delivery-medium producing apparatus as claimed in claim 12, further comprising a database operable to store image IDs respectively assigned to said images, wherein

said extra-printing request specifies said image to be extra-printed by specifying one of said image IDs that is assigned to said image to be extra-printed,

said delivery-medium recording unit specifies said image to be extra-printed by referring to said database and records said image thus specified onto said new recording medium.

14. (Original) A delivery-medium producing apparatus as claimed in claim 13, wherein said recording media stores said image IDs respectively assigned to said images together with said images, to help each of said users to select said image to be extra-printed.

15. (Currently amended) A delivery-medium producing apparatus ~~as claimed in claim 1, further comprising:~~

a receiving unit operable to receive a plurality of images from a plurality of users;

an image keeping apparatus operable to keep said plurality of images received and

recorded therein by said receiving unit;

a delivery-medium recording unit operable to record said plurality of images onto recording media in such a manner that each of said recording media stores one or more images of said plurality of images that were received from one of said users only; and

a keeping-time monitoring unit operable to monitor a keeping time for each of said plurality of images to determine whether or not said keeping time reaches an end of a predetermined keeping term, said keeping time being a time that has passed after said each of said plurality of images was recorded in said image keeping apparatus; and

a keeping-time notifying unit operable to notify, when said keeping time is determined to reach said end of said predetermined keeping term, a corresponding user of said each of said plurality of images that said predetermined term expired.

16. (Original) A delivery-medium producing apparatus as claimed in claim 15, wherein said image keeping apparatus deletes one of said plurality of images for which said predetermined keeping term expired, if no user's instruction is received from said corresponding user within a predetermined waiting time period after the notification.

17. (Currently Amended) A delivery-medium producing apparatus ~~as claimed in claim 1, further~~ comprising:

a receiving unit operable to receive a plurality of images from a plurality of users;

an image keeping apparatus operable to keep said plurality of images received and recorded therein by said receiving unit;

a delivery-medium recording unit operable to record said plurality of images onto recording media in such a manner that each of said recording media stores one or more images of said plurality of images that were received from one of said users only;

a payment-mode receiving unit operable to receive an instruction specifying a payment mode from each of said users; and

a payment processing unit operable to indirectly charge said each of said users in accordance with said specified payment mode.

18. (Currently amended) A computer-readable medium storing thereon a program for use in a digital camera capable of being connected to a phone, comprising:

a connection-detecting module operable to detect connection between said digital camera and said phone;

a calling module operable to make said phone to call a predetermined number; and

a transmitting module operable to make said digital camera transmit ~~one or more a~~ plurality of images captured by said digital camera via said phone automatically in accordance with an instruction determined by a user in advance.

19. (Currently Amended) A ~~program~~ computer-readable medium as claimed in claim 18, wherein said digital camera is connected to said phone by short-distance radio communication.

20. (Currently Amended) A ~~program~~ computer readable medium as claimed in claim 18, further comprising a monitoring module operable to monitor the number of said one or more images captured by said digital camera to determine whether or not said number reaches a predetermined number, wherein

said transmitting module makes said digital camera transmit said one or more images when said monitored number of said one or more images reaches said predetermined number.

21. (Currently amended) A capturing device, comprising:

a capturing unit operable to capture ~~an image~~ a plurality of images of an object; and

a controller operable to control said capturing device and to control a communication device capable of being connected to said capturing device to communicate with an external apparatus, wherein

each of said plurality of images are is-transmitted automatically to said external apparatus via said communicating device in accordance with an instruction determined by a user in advance.

22. (Original) A capturing device as claimed in claim 21, wherein said capturing device stores a program to be executed by said controller, and

said capturing unit transmits said image to said external apparatus in accordance with said program.

23. (Original) A capturing device as claimed in claim 22, wherein said capturing device is operable to store said captured image,

said controller of said capturing unit determines whether or not the number of stored images reaches a predetermined number, and

said transmission is performed in accordance with said program when said number of said images reaches said predetermined number.

24. (Original) A capturing device as claimed in claim 22, wherein said controller determines whether or not a predetermined time period has passed after said image was captured, and

said transmission is performed in accordance with said program when said predetermined time period has passed after said image was captured.

25. (Original) A capturing device as claimed in claim 22, further comprising a unit operable to receive a user's instruction to allow said transmission to be performed manually, wherein

said transmission is performed in response to said user's instruction in accordance with said program.

26. (Original) A capturing device as claimed in claim 25, further comprising a display operable to display said stored images to allow said user to select which image is to be transmitted to said external apparatus.

27. (Original) A capturing device as claimed in claim 21, wherein said communicating device is formed integrally with said capturing device as a single device.

28. (Currently amended) A delivery-medium producing method comprising:

receiving ~~one or more~~ a plurality of images from a capturing device by means of an image receiving unit, each of said ~~one or more~~ plurality of images being images automatically transmitted in accordance with an instruction determined by a user in advance, the plurality of images being transmitted as digital data from said capturing device or images brought into an image receiving place where said image receiving unit is placed while being recorded onto a negative film;

keeping said one or more images by recording said received one or more images in an image keeping apparatus;

recording said one or more images onto a recording medium; and

delivering said recording medium to a place specified by a user of said capturing device.

29. (Original) A delivery-medium producing method as claimed in claim 28, wherein said one or more images are transmitted via a phone capable of being connected to said capturing device via a wire or wirelessly.

30. (Currently Amended) A delivery-medium producing method as claimed in claim 28, further comprising, when said one of more images are brought into said image receiving place while being recorded onto said negative film, converting said received one or more images into digital data after said one or more images are read from said negative film, wherein

said one or more images converted are kept in said image keeping apparatus.

31. (Currently amended) A delivery-medium producing method ~~as claimed in claim 28, further~~ comprising:

receiving one or more images from a capturing device by means of an image receiving unit, said one or more images being images transmitted as digital data from said capturing device or images brought into an image receiving place where said image receiving unit is placed while being recorded onto a negative film;

keeping said one or more images by recording said received one or more images in an

image keeping apparatus;

recording said one or more images onto a recording medium;

delivering said recording medium to a place specified by a user of said capturing device

receiving a payment mode specified by said user; and

charging said user for a required cost in accordance with said specified payment mode.

32. (Original) A delivery-medium producing method as claimed in claim 31, wherein said user is allowed to specify that said user pays said required cost in cash when said user receives said recording medium delivered to said user's specified place.

33. (Original) A delivery-medium producing method as claimed in claim 31, wherein said user is allowed to specify at least charging via a bank or via a credit service company as said payment mode.

34. (Original) A delivery-medium producing method as claimed in claim 33, wherein, said one or more images are images transmitted via a phone connected to said capturing device, said user is allowed to specify charging via a telephone company as said payment mode.

35 (New) A delivery-medium producing apparatus as claimed in claim 1, wherein each of said plurality of images to be received by the receiving unit are captured and stored in a digital camera.

36. (New) A delivery-medium producing apparatus as claimed in claim 35, wherein said receiving unit receives said plurality of images in accordance with at least one of a shot date and a number of captured images.

37. (New) A computer-readable medium as claimed in claim 18, wherein each of said plurality of images are captured and stored in the digital camera.

38. (New) A computer-readable medium as claimed in claim 18, wherein said transmitting module transmits said plurality of images in accordance with at least one of a shot date and a number of captured images.

39 (New) A capturing device as claimed in claim 21, wherein each of said plurality of images are captured and stored in a digital camera.

40. (New) A capturing device as claimed in claim 21, wherein said plurality of images are transmitted in accordance with at least one of a shot date and a number of captured images.

41 (New) A delivery-medium producing method as claimed in claim 28, wherein the plurality of images, which are received by the receiving step, have been captured and stored in a digital camera.

42. (New) A delivery-medium producing method as claimed in claim 41, wherein said receiving step receives said plurality of images in accordance with at least one of a shot date and a number of captured images.
